SUMMARY

QA professional with experience in manual and automation testing, contributing to projects like a charitable marketplace and an art-selling platform. Improved productivity by automating test cases and streamlining workflows, ensuring high-quality software delivery and fine-tuned user experience.

EDUCATION

Dr. APJ Abdul Kalam Technical University   Lucknow,UP
Bachelors of technology in computer science   *Nov. 2020 – Jun, 2024*

Vidya Mandir Public School   Faridabad, Haryana
12th   *2020*

EXPERIENCE

QA Analyst trainee   Aug 2024 – Present
Eqaim technology and services   *Noida, UP*

- Automated the end-to-end testing process for 2+ projects, reducing testing time by 40 percent and increasing efficiency by 35 percent. Developed and executed 50+ robust test scripts to ensure comprehensive test coverage across functional, regression, and performance testing scenarios. Collaborated with development and QA teams to identify and implement automation opportunities, leading to a 25 percent decrease in defect resolution time. These efforts upgraded overall workflow efficiency, improved the quality of deliverables, and accelerated time-to-market for key features
- Conducted extensive manual testing across 2+ software modules to ensure top-notch quality, with a strong emphasis on usability, functionality, and performance. Executed detailed test cases, identified and reported 100+ defects, and collaborated with cross-functional teams to resolve issues effectively. Ensured alignment with project requirements and enhanced user experience through meticulous validation and testing practices.
- Identified and reported 50+ critical issues, collaborating with developers to ensure timely resolution and the successful deployment of high-quality software within project deadlines.

PROJECTS

Automated Charitable Marketplace | *Javascript, Playwright, docker, jmeter, jira, git, github*

- Conducted 100+ manual and automated tests to validate functionality and improved user experience across multiple projects.
- Validated payment flows, donation mechanisms, and platform responsiveness across devices.
- Visualized GitHub data to show collaboration
- Conducted load tests with JMeter on key donation mechanisms, identifying critical performance issues that led to improvements addressing the three primary causes of system crashes during peak traffic events.

Automated Art Marketplace | *Javascript, Playwright, docker, jmeter, jira, git, github*

- Performed manual and automation testing to validate core functionalities, including product listings, payment gateways, and user interactions.
- Conducted regression testing to ensure system stability during feature updates
- Automated repetitive test cases to improve efficiency and coverage

TECHNICAL SKILLS

Languages: JavaScript, SQL, HTML, CSS
Tools: Playwright, Apache Jmeter, Browser stack, Jira, Trello, Postman
Developer Tools: Git, GitHub, Docker
Tech & Frameworks: Bootstrap, ReactJS, material-ui
